

FOUNDATION OF MEDICAL WORDS

A. Structure

Most medical words are composed of two or more terms. To define a medical word:

- · divide the word into its terms
- · analyze the terms
- · define the word

Examples:

Pericarditis

peri = around; card = heart; itis = inflammation Inflammation around the heart

Oncology

onco = tumor, mass; logy = study of Study of tumors

B. Terms

Term + Term (.....+....) = medical wordThere are five categories of terms:

1. Prefix - beginning of a word

(ex., pre____; post_ Designated by a "___

<u>after</u> the term.

2. Suffix - ending of a word

(ex., ___stomy; ___ Designated by a "___

___*itis*)
_" <u>before</u> the term.

- 3. Root foundation/base of a word (ex., hepat; gastr)
- 4. Combining vowel vowel (usually "o") added to a root (ex., gastro).

Use a combining vowel when joining:

- a. Root to another root (ex., gastrohepatitis)
- **b.** Root to a suffix beginning with a consonant (ex., cardiomegaly)
- **5.** Combining form root + vowel (ex., hepat/o; gastr/o)

Designated by a "/" between the root and the vowel Examples:

Hyperleukocytosis

hyper (prefix) = excessive

leuko (combining form) = white

cvt (root) = cell

osis (suffix) = condition of

Definition: condition of excessive white blood cells (leukocytes)

Hematotoxic

hemato (combining form) = blood

tox (root) = poison

ic (suffix) = pertaining to

Definition: pertaining to blood poisoning

TIPS:

1. Some terms have more than one definition. To determine the correct definition in a particular medical word, analyze the other terms in the word. Example:

Poliomyelitis

polio = gray (matter)

myel = spinal cord, bone marrow

itis = inflammation

Definition: Inflammation of the gray matter of the spinal cord. The bone marrow does not have gray matter.

2. Some terms may function as a root/combining form in one word and a suffix in another word. Classification depends upon the specific medical word.

Examples:

Cytology

cyto (combining form) = cell

logy (suffix) = study of Definition: Study of cells

Erythrocyte

erythro (combining form) = red

cyte (suffix) = cell
Definition: Red blood cell

THE HUMAN BODY

A. Development

Cells - tissues - organs - systems - organism

- 1. Cells: Major Components
- a. Cell membrane
- b. Cytoplasm
- c. Nucleus
- 2. Tissues: Primary Types
- a. Connective
- b. Epithelium
- c. Muscle
- d. Nervous
- 3. Organs
- a. Composed of two or more different tissues
- **b.** Have specific functions
- 4. Systems: Related organs with common functions
- **5. Organism:** A living person
- B. Cavities

A space containing organs

- 1. Dorsal
- a. Cranial
- **b.** Vertebral (spinal)
- 2. Ventral
- a. Abdominal
- b. Pelvic
- c. Thoracic

C. Planes

An imaginary flat surface

- 1. Frontal anterior/posterior 2. Sagittal right/left
- 3. Transverse upper/lower

D. Positions

A reference point for location or direction.

- 1. Anterior/Ventral front of the body Posterior/Dorsal – back of the body
- **2.Deep** away from the surface Superficial - on the surface
- 3. Inferior situated below Superior - situated above
- **4. Lateral** pertaining to the side **5. Medial** – pertaining to the middle
- **6. Prone** lying face down **Supine** – lying face up

| TERMS | DEFINITIONS | WORDS |
